Research Objectives

Develop a system Research Paper Recommender System in the context of a digital library.

Specificities:

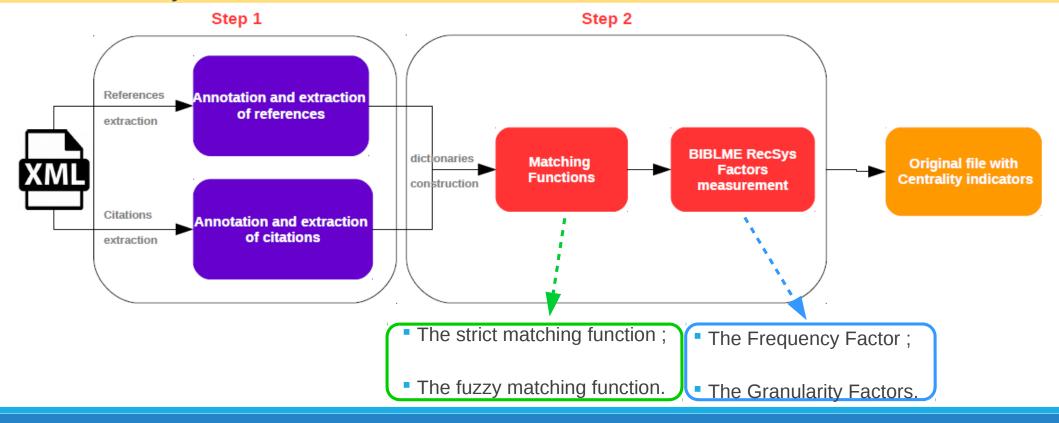

- guest
- full-text (XML TEI)
 - content
 - descriptive metadata
 - structural metadata

BiblMe RecSys: centrality indicator

Provide users with paper suggestions guided by the papers they are reading and by the references they contain.

BiblMeRecSys

BiblMe RecSys: matching functions

• The strict matching function checks whether bibliographic fields of two references match.

• The fuzzy matching function corresponds to the Levenshtein distance.

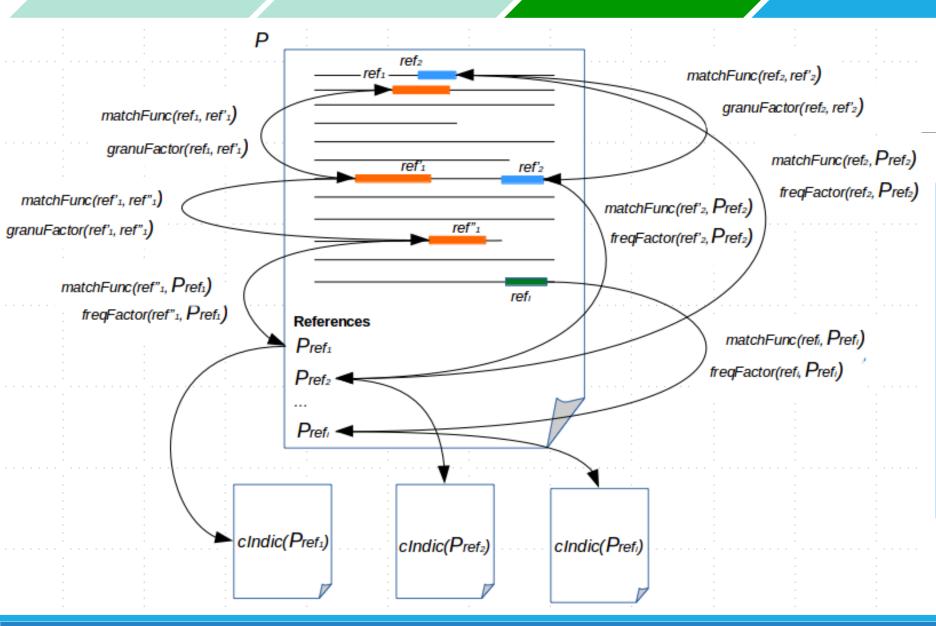

BiblMe RecSys: centrality factors

References' importance increase proportionally with numbers of mentions and more detailed discussion of the cited document (Tang, 2008).

- The frequency factor is based on citation counting.
- The granularity factors allow to distinguish how references are used by the authors:
 - <u>The fine granularity</u>: citations' concentration within low textual density areas tends to strengthen author's arguments on specic aspects of his researches.
 - <u>The coarse granularity</u>: more citations of a reference occur throughout the paper more the author is influenced by this work;

- Candidate paper to recommend (Pref_i)
- Centrality indicator (cIndic(Prefi))
- The matching functions (matchFunc(ref_i, ref_j))
- The frenquency factor (freqFactor(refi, Prefi))
- The granularity factors (granuFactor(ref_i, ref_j))

BM25 similarity

Experiments: Evaluation platform

- Two lists of five papers are proposed for each system;
 - Selection of the most relevant proposal;
 - Refining evaluation through an assessment;
 - Possibility to make comments.

Rank the selection You have selected "Gothique, réforme et Panoptique. Wrobel" Choose the proposal that is most relevante as a whole Proposition 1: Proposition 2: Surveiller et punir Gothique, réforme et Foucault L'œil du pouvoir Foucault The Castle of Otranto Walpone The Old English Baron Reeve Nights at the Circus Add a suggestion

Experiments: Results

Paper	BiblMe RecSys recommendation	SoE recommendation
Jaubert - Correspondance as an Ethical Genre	7	5
Bisson - Sufism and Tradition	8	0
Nabti - Sufis in Parisian suburbs	5	0
Laborde - The hermit and the virtuoso	6	0
Esquenazi - From star system to people	4	4
Danou - On a Novella of Arthur Schnitzler (1862-1931), Flight into Darkness	2	1
Wrobel - Gothic, Reform and Panoptic	3	0
Amiraly - The impact of a pilot water metering project in an Indian city on users perception of the public water supply	4	0
Masdonati - The question of identity in the dual Swiss vocational training system: a contrasting picture	1	5
Delannoy - Karst : from palaeogeographic archives to environmental indicators	1	0
Duval - The deceased to the shackles	2	2
Angevin - The Magdalenian lithic industry from the openair site of la Corne-de-Rollay (Couleuvre, Allier): production standards and production lines variability	2	0

Conclusions and perspectives

Conclusions:

- Paper suggestions guided by the paper the user is reading and by the references it contain;
- Predict **references' importance** through textual features ;
- Recommend papers according to their centrality indicator.

Perspectives:

- Examine the degree of users' satisfaction;
- Exploit recommendation algorithms by graph analysis;
- Determine relations between references and their proximity .

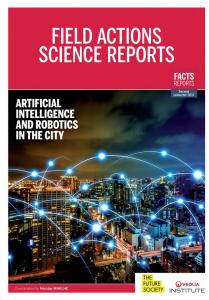

Thanks for your attention

In short digital technologies, which McLuhan described as an extension of our nervous system (McLuhan, 1964), will be integrated into large "internet of things" architectures [...] "digital nervous systems" of urban, even planetary scales (Mitchell, 1995, 2000, 2003). [...] "upgrading" of traditional cities infrastructures has created a '\$100 billion jackpot' (Townsend, 2013, pp. 19), one that has fueled an industrial race for the transformation of the next generation of urban infrastructures. [...] in the following decades of explosive urban growth and reconfiguration (Townsend, 2013). [...] through a variety of digital augmentations (Wiig, 2015), and question the self-congratulatory rhetoric surrounding them, their fuzzy definition and overall ideology (Holland, 2005). [...] "As traditional cities have evolved so have customs, norms and laws governing rights to privacy, access to public and semi public places and exertion of control" (Mitchell, 1996, p.131)
